

Configuring Your Phone for the Eastlink Network

Your compatible, unlocked phone should be able to make voice calls and send/receive text messages on the Eastlink network. However, you may still have to program your phone for MMS and data capabilities. Below is the information you need to configure your phone's data connection for reference. When you activate your phone in store, an Eastlink representative will do this for you.

BlackBerry Users Please Note - If you are using a compatible and unlocked BlackBerry device not purchased from Eastlink, data will automatically be configured when you insert your Eastlink SIM card.
